

Job Description
Intterra Engineering Manager
Location- Castle Rock, CO, Hybrid work environment

What you'll do here at Intterra:

The Intterra Engineering Manager coordinates and manages the engineering staff to design and develop software-as-a-service applications that serve public safety professionals and communities. Intterra's engineering manager will develop, manage, and coordinate priorities and tasks across the engineering team in cooperation with the company product manager and chief architecture. The manager will also serve as a mentor to engineering staff. In addition, the engineering manager provides direct input to Intterra's Product Manager and business leads on technical feasibility, software development lifecycle, and performance of engineering solutions.

Required Skills:

- Knowledge and experience with software-as-a-service technologies, engineering, and deployments
- Knowledge and experience with the software development life cycle
- Experience and training in agile development methodologies
- Experience working in small teams with a great deal of autonomy
- Experience with various development environments, versioning tools, SCM
- Cloud-native container platforms
- Excellent communication and collaboration skills
- Proven experience in software development and engineering
- Well versed in security principles, adaptability, team first attitude and awesome
- Ability to implement, follow and enforce stringent development processes
- Proven ability to mentor and coach other engineers

To apply, go to <https://www.intterragroup.com/careers/> and submit a resume with a cover letter. Not all submissions will receive a response due to the volume of candidates we expect for such a coveted opportunity.
